Cleaning Service:
RedIRIS AntiMalware Unified Platform

RedIRIS relies on **SPAMINA** to clean its affiliate institution's emails from threats

RedIRIS is the national research and education network (NREN) for Spain providing advanced communications services to the scientific community and National Universities

"An email downtime is as serious as a break in the communication line" explains **Tomás de Miguel, General Director of RedIRIS**

RedIRIS trusts **SPAMINA** technology to launch their **Cleaning Service**. For institutions affiliated to RedIRIS this offer comes for free, protecting the corporate email with content filtering functionalities, antispam, malware detection and cleaning. It also includes Webmail contingency to ensure business continuity.

An Efficient Solution for Institutions

The release of the Cleaning RedIRIS service is due to the persistence of Spam and malware attacks that are increasing to the institutions. This is the explanation of the **Coordinator of the Email Services** of RedIRIS, **Jesús Sanz de las Heras,** *"Looking for efficent solutions for our institutions, we concluded that we could take advantage of economies of scale to deliver service protection and cleanliness email"*

The solution that RedIRIS have chosen is **Cloud Email Firewall** from **Spamina**. A solution that is perfectly suited to the needs of the project by the strength of the solution, reputation and scalability.

Cloud Email Firewall, incorporates innovative technologies to protect against last generation threats such as **Simile Fingerprint Filter®.** This technique detects outgoing spam, differentiating and separating the legitimate corporate email, of automated mass mailings. In addition, the use of detection technologies to analyse billions of emails every day enables identifying and blocking incoming malware and spam in real time, leaving any threats stored in the cloud of Spamina.

In this way, the institutions will only receive clean mail, while the spam will remain to the cloud of Spamina.

> *"Administrations require solutions that are flexible, easy to manage and affordable"* states **Jesús Sanz de las Heras, Coordinator of the email services of RedIRIS**

A Scalable Architecture

RedIRIS has **more than 500 affiliated institutions**, their cleaning service protects daily more than one million emails, this requires a large capacity of the organization to adapt contracting services to the needs of each moment. Once again Spamina Cloud solution enables the service provisioning RedIris to go according to the requests of their institutions.

"We need a scalable architecture that allows an easily way to increase the service processing capabilities, not forgetting an adequate level of support", says the expert.

The inclusion of Cloud Email Firewall integrated on the Cleaning service of RedIRIS is the big advantages that this offer to the institutions:

- Protection of mail storage servers, ensuring mail delivery at all times.

- Monitored and centralized traffic management 24 x 7

- High availability

- Maintenance 365x7x24

- Elimination of local resources

- Clear solution without installing any additional software

- **Contingency Webmail**: access to emails stored on the platform in case of server crashes
