

ParlaMI, Enterprise Instant Messaging

A step forward for the optimization and protection of corporate communications

Why should you use instant messaging in your business environment?

- Optimize business communications
- Connect people anywhere in real time
- Create individual and group conversations
- Share reports and documents during the instant chat session

ParlaMI, a secure enterprise instant messaging service

- Conversations are encrypted and protected by authentication
- Cost-effective
- Enables employees to organize calls and virtual meetings from any device
- Antivirus filtering and data breach prevention
- Conversations are archived for compliance requirements

Why should your company use ParlaMI

Parla users have an integrated instant messaging service in their email, called ParlaMI, which enables real-time conversations with **secure end-to-end** communications between Parla individual or group users.

Now available fully embedded in Outlook. This new ParlaMI Outlook plug-in, enables end users to enjoy email and instant messaging within the same window, avoiding application's overlapping and screen switch over. ParlaMI is also available through the Webmail and the Spamina App. This Instant Messaging App comes with encrypted end-to-end technology, DLP, antimalware and archiving, to ensure that the company communications are protected.

ParlaMI optimizes the use of the email within organizations, and facilitates interdepartmental communications, with the peace of mind that conversations are encrypted from end-to-end. Users can set up groups, protect rooms with password and share documents from the add-in of Outlook

New version includes push notifications for all devices. When a Parla user starts a session, a tab automatically pops up on the screen advising him to access the chat service without needing to close the application email.

Now, secure and confidential chat conversations from any device with the NEW application ParlaMI for iOS & Android devices and videoconference call via webmail.

Parla users can start making the most of the videoconference service provided from the ParlaMI web interface that enables real time communication.
