

Spamina for Office 365

Maximize the **safety** of your Office environment against advanced threats and **ensure the privacy** and accuracy of the information.

The best in breed of protection and control for your O365 environment

Although Microsoft provides some basic safety layers, threats are increasingly sophisticated and difficult to detect, which requires hiring specific E-mail protection solutions, designed by security experts, that incorporate advanced intrusion detection technologies.

Spamina has developed the Outlook Add-in for the whole E-mail security suite it offers to users and administrators:

- › **Greater Usability:** the solutions are integrated and accessible from the user panel.
- › **Single Control Console:** Administrators can define security policies, perform analysis and reports to keep track of employee **activity**.
- › **Business Continuity:** if the E-mail server crashes, Spamina's safety solutions facilitate E-mail sizing, backups and webmail access, so that the computers can continue working while the service is restored, all at no additional cost.
- › **Regulatory Compliance:** E-mail archiving and encryption solutions help ensure communications privacy and availability.
- › **Data Protection:** Spamina, a European Company, is legislated by the European Union regulation that protects data transmission to third parties.

Threat Prevention

Protection, prevention and blocking of advanced threats in E-mail and in instant messaging, in real time

E-mail is always available, free of malware.

Sandboxing Technology for the detection of advanced threats in real time.

Information Protection, Archiving & Compliance

E-mail archiving and encryption to ensure privacy and prevent information leakage

Archiving and E-Discovery to comply with Data Protection Regulations.

Information Privacy Guarantee and Prevention of Data Leakage.
